## Electricity Bill in the Dominican Republic

Demand charge (\$/kW) is calculated based on the average of the two months with the highest peak, then all sub-sequence months throughout that year will be charged with this fixed value. In this example, month 07/19 and 09/19 registered the two highest peak ([50.410 kW + 39.790 kW]/2 = 45.100 kW).
